composite
windows and doors

*“Simplicity is the
hardest design principle
to follow.”*

WELCOME

When it comes to replacing your doors and windows, you want to consider the most elegant and design led solution - aluminium and timber composites.

Tough, durable colour coated aluminium externally, warm to the touch timber internally.

Combine these with high performance sealed units to give you beautiful, durable energy efficient windows ('U' value 1.7, WER band 'C')

And , of course, as a long established local retailer we have the knowledge to survey, install and service your requirements too.

Perfect harmony, perfect fusion.

WINDOWS

Traditionally, windows in the UK were single glazed and made from very slim timber sections. With the advent of double glazing and bulkier frame materials, the sections became bigger - often changing the character of the home and reducing light into the rooms.

With our frame the balance is restored. Elegant profiles maximising natural light.

Consistency in design on the outside with a careful use of colour can transform the look and value of your home. And now you have options inside - room to room - for either traditional or contemporary finishes.

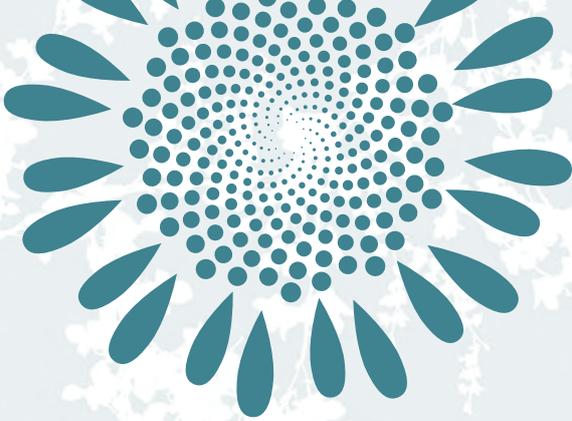

*“Natural styling,
elegant aesthetics,
designed for you”*

DOORS

Selecting the right style of door to make that grand entrance or maximising security to the side or rear of your home is a major decision.

Virtually all shop fronts are made from aluminium because of the strength, durability and security it provides. We have combined this technology with the beauty of wood to provide a truly aesthetically pleasing residential application.

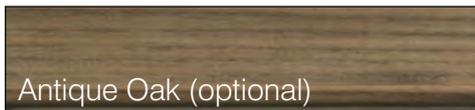

Traditional or very modern solutions can be obtained with a slim yet reassuringly solid and secure product. Inward or outward opening, French or single, folding or sliding - the choice is yours.

“A fusion of two materials working in perfect harmony”

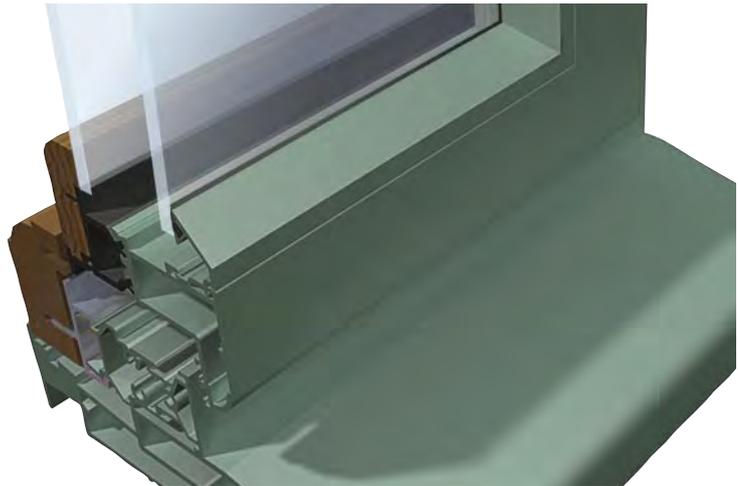

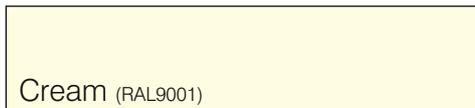

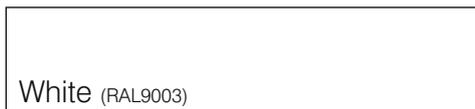

INTERNAL FINISHES (using Ash)

We can supply timber primed in white ready for your own internal decoration to take place

EXTERNAL FINISHES (Standard)

Other external finishes are available, see below.

RAL 1018 Zinc Yellow	RAL 1019 Grey Beige	RAL 2002 Vermillion	RAL 2004 Pure Orange	RAL 3003 Ruby Red	RAL 3004 Wine Red	RAL 3020 Traffic Red	RAL 5004 Black Blue	RAL 5012 Light Blue	RAL 5014 Pigeon Blue	RAL 5015 Sky Blue	RAL 6002 Leaf Green
RAL 6009 Fir Green	RAL 6019 Pastel Green	RAL 6027 Light Green	RAL 7030 Stone Grey	RAL 7036 Platinum	RAL 7045 Telegray 1	RAL 8003 Clay Brown	RAL 8011 Nut Brown	RAL 8014 Sepia Brown	RAL 8016 Mahogany	RAL 9005 Jet Black	RAL 9022 Black Brown

OPTIONS

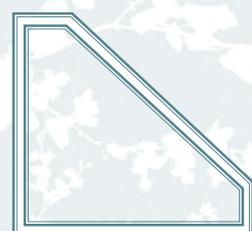

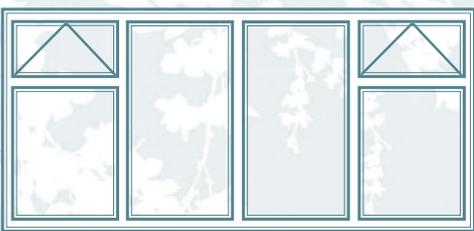

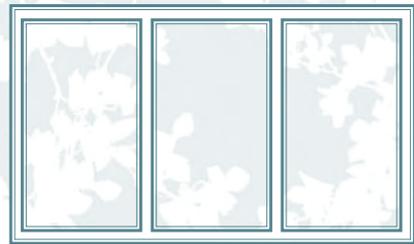

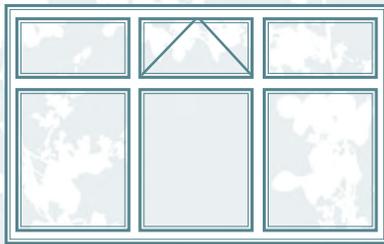

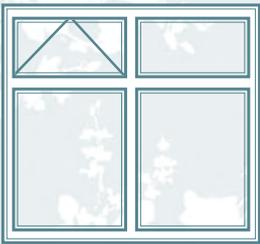

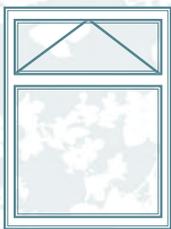

Colour and material options are virtually infinitely variable. Internally, you can choose different timber finishes in differing rooms or order your frames pre-primed ready to receive your own decoration.

Externally, powder coated aluminium is used and is available in a range of standard colours - or as an option - choose from a wide range of RAL or BS colours.

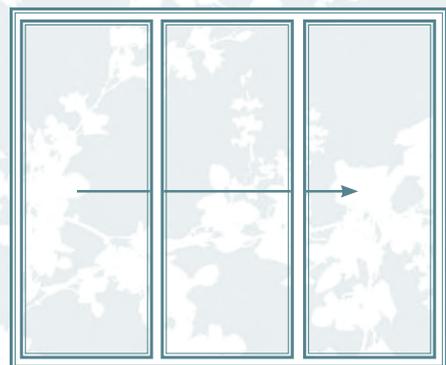

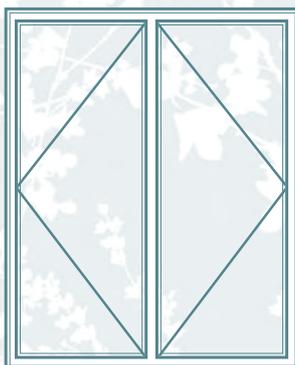

Windows

We can vary the type of glass used in your windows and doors, to include the most thermally efficient and even self cleaning Pilkington Activ glass.

Our hardware - locks, handles, hinges, mechanism and fixings are of the highest quality. Additional higher security options are available for vulnerable situations.

Doors

Low 'e' sealed units

Powder coated aluminium (4 standard colours - other colours available)

Reinforced mechanically jointed corners

Ash timber internally (choice of 4 finishes)

PVC thermal break

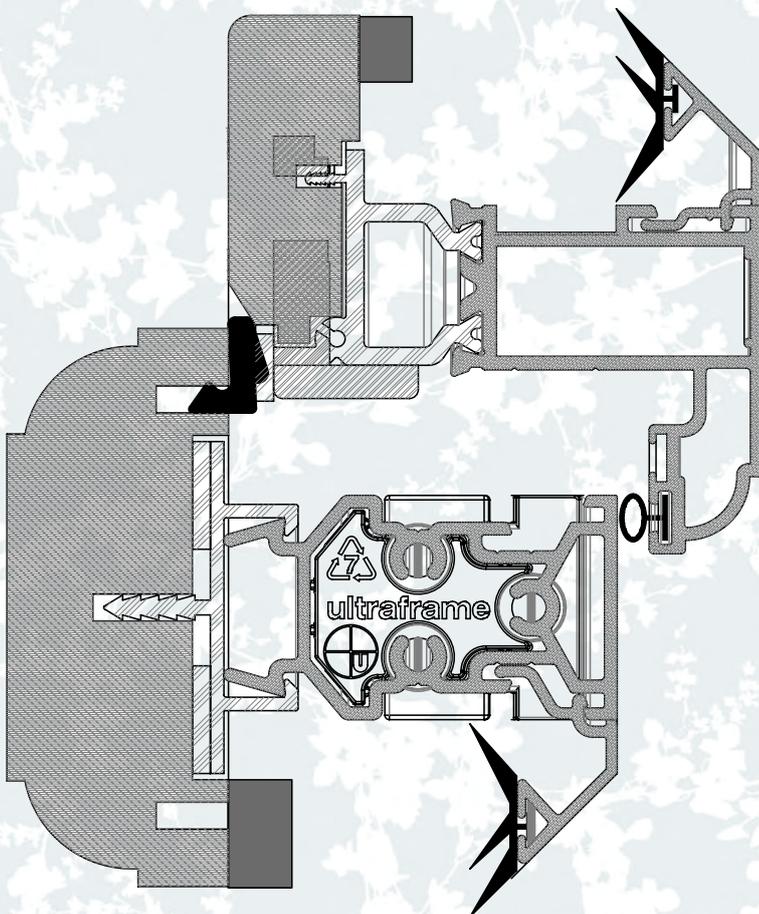

Cill depths of 85, 135 & 190mm

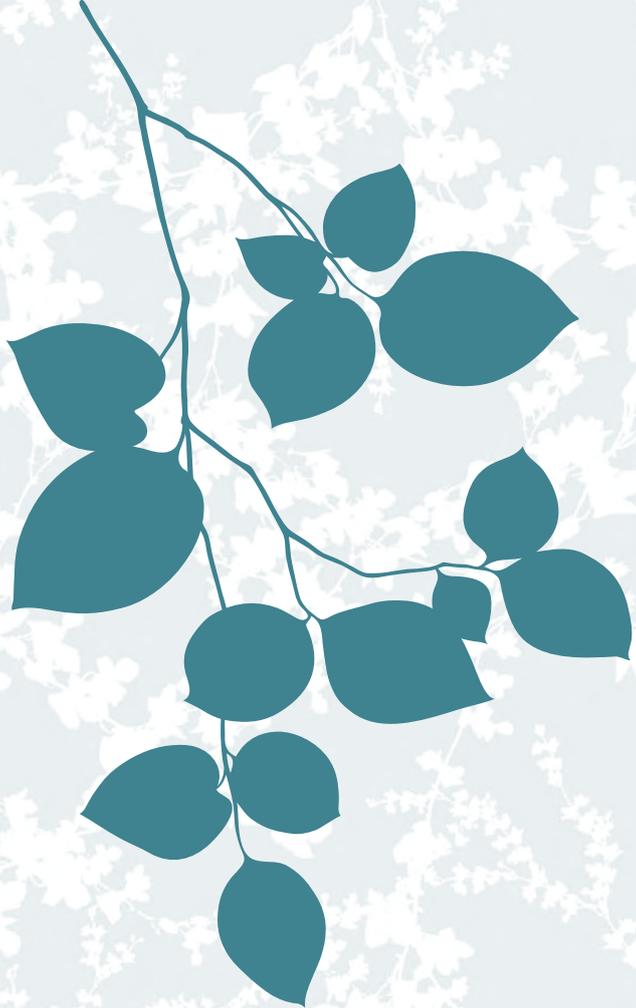

TECHNICAL SPECIFICATION

Some so called 'alternative' systems are often predominant timber with a thin aluminium foil exterior which still allow water to come in contact with the timber, lowering the life expectancy of the window.

Unlike weaker alternatives, our system is mainly aluminium providing strength and durability where it is needed - in the locking and hinge areas. Any moisture or condensation reaching the glazing chamber cannot reach the internal timber due to the PVC thermal break. This thermal break limits cold air transferring to the timber and virtually eliminates any condensation forming.

The timber becomes an integral part of the system prior to final assembly. The final assembly connects both materials independently, catering for any differences in expansion. Preformed insulated foam is inserted around the sections to provide a lower U-value (a measure of thermal performance) to help comply with Building Regulations and making your home as comfortable as possible.

A stylized teal silhouette of a leafy branch is positioned in the upper left corner of the page. The background is a light teal color with a repeating pattern of small white flowers and leaves.
